Gas Stoves or Hot Plates Gas Heaters and Radiators

Welsbach

DISPLAY ROOM AND OFFICES, - - - - - 16-20 OLIVER STREET
STOREHOUSE AND SHIPPING DEPT., - - - - - 275 CONGRESS STREET

BOSTON, MASS.

S you look over the following pages, you will be impressed by the fact that we have "the right goods at the right price." Our line is the result of years of experience with the New England trade. Our Hot Plates are of the latest design, some of them being equipped with double burners. We show a full line of Gas Heated Sad Irons, Nursery Burners and appliances. Our Gas Heaters and Radiators were selected after carefully comparing the merits of practically all the goods on the market, and they embody, as do our high-grade Hot Plates and Irons, the greatest number of scientific principles of construction. They are well made, intelligently designed and finely finished.

We call your attention to the following articles below, shown on their respective pages, which are new this year:

No. 1441 Hot Plate, on page 105.

No. Model 9 I. M. E. Gas Iron, on page 109.

No. 1313 Heater, on page 112.

This Bulletin Supersedes A-5.

Interior Construction

This cut shows the special flue system. The heat strikes the circular piece at the bottom, which is lined with asbestos, and is deflected up into the oven, passing through the holes in the ends of the lining, around the lining and out the holes in the top. We guarantee them to be perfect bakers in every respect, and rapid sellers.

Model 9. With Regulator

Model 9. Without Regulator

Tailors' and Dressmakers' Iron

THE I. M. E. (Ironing Made Easy) MODELS M and 9 GAS HEATED SAD-IRONS

For Domestic and Steam Laundry Use

Light the Iron at the point, after opening top.

MODEL 9

This model 9 I. M. E. Iron is the finest gas heated sad-iron made, and we recommend it particularly for its convenience and efficiency. It has a hinged top, making it very easy to light and clean; a **regulator** can be furnished, by which the heat of the iron may be regulated, and when the iron is not to be used for a few moments, the gas can be partially shut off, thus making it economical and at the same time keeping the iron up to temperature.

The back, sides and bottom are polished nickel, and the top and guard satin finished nickel, which gives it a beautiful appearance.

The iron is $6\frac{1}{2}$ inches long, $4\frac{1}{2}$ inches wide at the heel, and weighs $5\frac{3}{4}$ pounds, and it contains a number of important improvements over last year's iron, involving the addition of a perforated **gauze** over the air ports, which will keep out all lint and dirt, and the attaching of the heating parts by **means** of a yoke, which affords an easy means of removing the mixing chamber and gauze if necessary.

With each iron is furnished an asbestos mat, and where price includes tubing, a 6-foot length is furnished, and where rubber tubing is specified, two coiled wires to prevent the tubing from kinking.

Freight paid on lots of forty-eight (48) or more f. o. b. factory, Binghamton, N. Y.

Nos. 133, 138, 139 and 1320. Very Efficient Heaters at Popular Prices.

Fitted with fire clay deflectors, these heaters hold and radiate heat longer than the ordinary make. The body is made of the best grade of blue steel. The base is nickel-plated, making a most attractive stove.

The flame from the Bunsen burner impinges on the fire clay cone, bringing the same to an incandescent heat. One illustration shows the larger size, the No. 139, which is recommended for the heating of large rooms, offices, etc.

No. 1320 not equipped with the clay deflector.
